Pending Claims

The listing of claims will replace all prior versions, and listings of claims in the application.

1. (Previously Presented) An analog to digital converter (ADC) comprising: a first amplifier tracking an input voltage with its output;

a coarse ADC amplifier connected to a coarse capacitor at its input and having a coarse ADC reset switch controlled by a first clock phase;

a fine ADC amplifier connected to a fine capacitor at its input and having a fine ADC reset switch controlled by a second clock phase, wherein a set of reference voltages is selected for use by the fine ADC amplifier based on an output of the coarse ADC amplifier,

wherein the coarse capacitor is charged to a coarse reference voltage during the first clock phase and connected to the first amplifier's output voltage during the second clock phase, and

wherein the fine capacitor is connected to a fine reference voltage during the first clock phase and charged to the first amplifier's output voltage during the second clock phase; and

an encoder that converts outputs of the coarse and fine ADC amplifiers to a digital output.

- 2. (Original) The analog to digital converter of claim 1, wherein the coarse ADC reset switch is a field effect transistor (FET).
- 3. (Original) The analog to digital converter of claim 1, wherein the first and second clock phases are non-overlapping.
- 4. (Original) The analog to digital converter of claim 1, wherein the fine ADC amplifier includes a plurality of cascaded amplifier stages.

- 5. (Original) The analog to digital converter of claim 1, wherein the coarse ADC amplifier includes a plurality of cascaded amplifier stages.
- 6. (Previously Presented) The analog to digital converter of claim 1, wherein the coarse capacitor is connected to the first amplifier's output on a delayed second phase.
- 7. (Previously Presented) The analog to digital converter of claim 1, wherein the fine ADC capacitor is connected to the first amplifier's output on a delayed second clock phase and to the fine reference voltage during a delayed first clock phase.
- 8. (Previously Presented) The analog to digital converter of claim 1, further including a switch that connects an output of the first amplifier to the coarse capacitor on the second clock phase.
- 9. (Original) The analog to digital converter of claim 1, further including a coarse comparator that latches the output of the coarse ADC amplifier and outputs it to the encoder.
- 10. (Original) The analog to digital converter of claim 1, further including a fine comparator that latches the output of the fine ADC amplifier and outputs it to the encoder.
 - 11. (Previously Presented) An analog to digital converter comprising: a track-and-hold amplifier tracking an input voltage;
- a first plurality of amplifiers each connected to a corresponding capacitor at its input, wherein the amplifiers of the first plurality are reset on a clock phase N_1 and their corresponding capacitors are connected to an output of the track-and-hold on a clock phase N_2 ;
- a second plurality of amplifiers each connected to a corresponding capacitor at its input, wherein the amplifiers of the second plurality are reset on the clock phase N_2 and Atty. Dkt. No. 1875.2820002

their corresponding capacitors are charged to the track-and-hold amplifier output voltage on the clock phase N_2 and wherein a set of reference voltages is selected based on outputs of the first plurality of amplifiers, for input to the second plurality of amplifiers on the clock phase N_1 ; and

an encoder that converts outputs of the first and second pluralities of amplifiers to a digital output.

- 12. (Previously Presented) The analog to digital converter of claim 11, further including FET switches that reset the first plurality of amplifiers on the clock phase N_1 .
- 13. (Previously Presented) The analog to digital converter of claim 11, wherein the clock phases N_1 and N_2 are non-overlapping.
- 14. (Previously Presented) The analog to digital converter of claim 11, wherein each of the second plurality of amplifiers includes a plurality of cascaded amplifier stages.
- 15. (Previously Presented) The analog to digital converter of claim 11, wherein each of the first plurality of amplifiers includes a plurality of cascaded amplifier stages.
- 16. (Previously Presented) The analog to digital converter of claim 11, wherein the capacitors of the first plurality of amplifiers are connected to the track-and-hold amplifier output on a delayed clock phase N₂.
- 17. (Previously Presented) The analog to digital converter of claim 11, wherein the capacitors of the second plurality of amplifiers are connected to the track-and-hold amplifier output on a delayed clock phase N_2 , and to the set of reference voltages on a delayed clock phase N_1 .

- 18. (Previously Presented) The analog to digital converter of claim 11, further including switches that connect an output of the track-and-hold to the capacitors of the first plurality of amplifiers on the clock phase N_2 .
- 19. (Previously Presented) The analog to digital converter of claim 11, further including a first plurality of comparators that latch the outputs of the first plurality of amplifiers and output them to the encoder.
- 20. (Previously Presented) The analog to digital converter of claim 19, further including a second plurality of comparators that latch the outputs of the second plurality of amplifiers and output them to the encoder.

21. - 31. (Cancelled)

- 32. (Previously Presented) An analog to digital converter comprising: a track-and-hold amplifier tracking an input voltage;
- a first amplifier that resets on a clock phase N_1 and amplifies a difference of an output of the track-and-hold amplifier and a first voltage reference on a clock phase N_2 , wherein the track-and-hold amplifier is in a hold-mode on the clock phase N_2 ;
- a second amplifier that resets on the clock phase N_2 and amplifies a difference of the output of the track-and-hold amplifier and a second reference voltage on the clock phase N_1 , wherein a first set of reference voltages is selected for use by the second amplifier based on an output of the first amplifier; and

an encoder that converts outputs of the first and second amplifiers to a digital output.

33. (Previously Presented) A method of converting an analog voltage to a digital voltage comprising the steps of:

resetting a first amplifier on a first clock phase;

charging a first capacitor to a first reference voltage during the first clock phase;

connecting the first capacitor to an input voltage during a second clock phase wherein a track-and-hold amplifier is in a hold-mode during the second clock phase;

selecting a second reference voltage based on an output of the first amplifier; connecting a second capacitor to the second reference voltage during the first clock phase;

charging the second capacitor to the input voltage during the second clock phase; amplifying a voltage on the first capacitor on the second clock phase; resetting a second amplifier on the second clock phase; amplifying a voltage of the second capacitor on the first clock phase; and converting outputs of the first and second amplifiers to a digital output.

34. (Cancelled)

- 35. (Previously Presented) The analog to digital converter of claim 1, wherein the first amplifier is in a hold-mode during the second clock phase.
- 36. (Previously Presented) The analog to digital converter of claim 1, further including a switch matrix to select the set of reference voltages for use by the fine ADC amplifier.
- 37. (Previously Presented) The analog to digital converter of claim 11, wherein the track-and-hold amplifier is in a hold-mode on the clock phase N_2 .
- 38. (Previously Presented) The analog to digital converter of claim 11, further including a switch matrix to select the set of reference voltages based on the outputs of the first plurality of amplifiers.
- 39. (Previously Presented) The analog to digital converter of claim 32, wherein the track-and-hold amplifier is in a hold-mode during the clock phase N₂.

40. (Previously Presented) The analog to digital converter of claim 32, further including a switch matrix to select the set of reference voltages for use by the second amplifier.
